

14 CFR Part 107 Commercial Drone Operations

by [Nick Clark](#) | Published April 25, 2026

Part 107 Frame

14 CFR Part 107 establishes commercial small unmanned aircraft (sUAS) operating rules with substantial commercial deployment scale. Emerging FAA BVLOS waivers and emerging Part 108 BVLOS rule push toward expanded operations.

Architecture Implications

BVLOS and higher-class commercial drone operations require structural support for operator-intent declaration, mission scope authorization, and emerging incident reconstruction.

Architectural Mapping

Operator-intent substrate supports operator-of-record authority. Stage-gated commitment supports phase-decomposed drone operations. Composite admissibility supports multi-authority drone operations (operator, FAA, local authorities).

Part 107 Evolution

FAA emerging Part 108 BVLOS rule, emerging Remote ID enforcement, and emerging UTM integration push toward structurally-supported architecture.
