

Critical Infrastructure Fleet Health Under CISA

by [Nick Clark](#) | Published April 25, 2026

CISA Frame

CISA Critical Infrastructure protection guidance, sector-coordinator coordination across 16 sectors, and emerging incident-reporting requirements (CIRCIA implementation) all impose structural requirements.

Implementation-level compliance produces cross-sector friction.

Fleet-Health Substrate

Each critical-infrastructure party contributes continuous credentialed health observations under sector-coordinator authority. Cross-sector composite assessment operates through declared federation; cross-sector incident-coordination admits through declared multi-sector federation.

CISA participates as credentialed coordinator; sector-coordinators (E-ISAC, IT-ISAC, MS-ISAC, similar bodies) participate as credentialed regulatory observers.

CISA Trajectory

CIRCIA implementation, emerging climate-resilience integration, emerging cyber-physical convergence all benefit from architectural fleet-health substrate.
