

# Septentrio GNSS Lacks Cooperative Multi-Modality Substrate

by [Nick Clark](#) | Published April 25, 2026

## Septentrio Reality

Septentrio operates GNSS-receiver products with anti-jam, anti-spoof features deployed across surveying, agriculture, and emerging defense applications.

## Multi-Modality Substrate

Septentrio's GNSS hardware contributes as one credentialed modality within cooperative mesh; multi-modality composition adds resilience GNSS-only approaches cannot match.

## Septentrio Position

Septentrio gains multi-modality composition layer above GNSS hardware.
