

OpenAI Fine-Tuning and Reinforcement Fine-Tuning

by [Nick Clark](#) | Published April 25, 2026

Fine-Tuning Reality

OpenAI fine-tuning operates across customer fine-tuning workloads with emerging RFT for reasoning-model customization. Platform-internal training operations are operationally coherent.

Provenance Gap

Cross-jurisdiction training operations face emerging EU AI Act provenance requirements, FDA-class medical-AI training-provenance requirements, and emerging defense-AI training-attestation requirements that platform-internal handling does not externalize structurally.

Training-Governance Substrate

Training contributions enter as credentialed observations; depth-selective routing produces credentialed update events; per-example provenance supports regulatory and incident audit.

Where OpenAI Training Is Heading

OpenAI gains regulatory-aligned training-governance substrate.
